In the U.S., 1.4 million Persons Were Estimated to Be Living with HIV in the US at the end of 2008.

AIDS is the Leading Cause of Death Among Black Women Aged 25 to 34, and Black Men Aged 25-44 in the U.S.
Half of All New HIV Infections in the U.S. in Recent Years Have Been Among African Americans.

U.S. Cases are Growing Fastest Among: Men Who Have Sex with Men, Persons in Their Teens and 20s, Minorities, Women, and Persons Living in the South.

Globally, AIDS is the leading cause of death in women aged 15-49.

More than 70% of Global HIV Infections are Attributed to Heterosexual Contact.

In 2008: 1.7 to 2.4 million Adults and 150,000 to 410,000 Children Died of AIDS Complications and 2.4 to 3.0 million Persons Were Infected with HIV Worldwide.
15 million children world wide have lost one or both parents to AIDS.

HIV infection became reportable in Florida in 07/1997. Although they are not necessarily new, HIV cases tend to be more recent than AIDS cases. Compare the percentages of both to see how trends are shifting. Totals do not include persons living in Florida who were initially reported in other states or other Florida counties. Data is adjusted appropriately when cases change status from HIV to AIDS or when determined to have been reported earlier in another state or other Florida county. Cases reported from within the Florida Department of Corrections are excluded to more accurately represent the local epidemic. *Persons living with HIV/AIDS. **Includes MSM/IDU.
